

Mini Task Management System

Key Features

1. Task Creation and Deletion:

- Users can create tasks with relevant details and remove tasks when completed or no longer needed.

2. Interactive Frontend:

- A user-friendly interface built using HTML, CSS, and JavaScript.
- Dynamic task management features for an enhanced user experience.

3. Backend Functionality:

- Developed using Django, ensuring secure and scalable data handling.
- Includes task CRUD operations (Create, Read, Update, Delete).

4. Database Integration:

- Seamless connection to a database for storing and retrieving task data persistently.

5. Responsive Design:

- Ensures compatibility across devices and screen sizes.

Technologies Used

- Frontend:
 - HTML, CSS (with Flexbox for layout design).
 - JavaScript for interactive elements.
- Backend:
 - Django (Python Framework) for server-side logic.
 - Django templates for dynamic HTML rendering.
- Database:
 - MYSQL for storing tasks.

Others:

- Postman (For API testing)
